

Team: Minimum Viable Product

OOP Iteration 3 -- COP4331

We used Apache Maven to build this project.
Make sure it is installed by typing `which mvn`

Homepage: <https://github.com/Iteration-3/Code>

Running the Pre-Compiled Jar File

To run the Pre-Built version of the Game:

- Copy the Root of the CD-ROM into a Folder on your Desktop
- `cd` to the folder called Pre-Built-Jar
- execute the command `sh RunGame.sh`, or on a Windows box, run `RunGame.bat`

Build Instructions

To build:

- Copy the Root of the CD-ROM to a Folder on your Desktop
- `cd` to the root of the src directory
- Upon executing the `ls` command, you should see a file called `pom.xml`
- Execute the command: `mvn clean install`
- To run the built `.jar` file, execute: `java -jar target/MinimumViableProduct.jar`

Note, you may also get the source code by running the command:
`git clone https://github.com/Iteration-3/Code`
